

Language Identifiers and Locales

Language Identifiers and Locales

A version of this page is also available for

[Windows Embedded CE 6.0 R3](#)

4/8/2010

The NLS tables describe the language identifiers available to an OS design. A language identifier is a sixteen bit value that consists of a primary language identifier and a sublanguage identifier. This differs slightly from a locale identifier (LCID), which is 32 bits and includes the primary language identifier, sublanguage identifier and a sort identifier.

Platform Builder uses the LCIDs in your NLS table to determine which locales to support in your OS design. You can modify the NLS table to add or remove locale information. Use the [MAKELCID](#) macro in your applications to create an LCID. Use the language identifier to set the LOCALE environment variable for a localized build of the OS.

The following table shows the worldwide languages and locales.

Language identifier	Language	Sublanguage - locale	Default code page	Language code
0x0436	Afrikaans	South Africa	1252	AFK
0x041c	Albanian	Albania	1250	SQI
0x1401	Arabic	Algeria	1256	ARG
0x3c01	Arabic	Bahrain	1256	ARH
0x0c01	Arabic	Egypt	1256	ARE
0x0801	Arabic	Iraq	1256	ARI
0x2c01	Arabic	Jordan	1256	ARJ
0x3401	Arabic	Kuwait	1256	ARK
0x3001	Arabic	Lebanon	1256	ARB
0x1001	Arabic	Libya	1256	ARL
0x1801	Arabic	Morocco	1256	ARM
0x2001	Arabic	Oman	1256	ARO
0x4001	Arabic	Qatar	1256	ARQ

0x0401	Arabic	Saudi Arabia	1256	ARA
0x2801	Arabic	Syria	1256	ARS
0x1c01	Arabic	Tunisia	1256	ART
